2. The following is an examiner's statement of reasons for allowance:
3. U. S. Patent No. 4,839,583 to Takano et al. is the reference closest to the claimed invention. Takano et al. disclose a memory medium comprising program instructions for specifying a signal analysis function, comprising: receiving first user input indicating a parameter for a first operation, wherein the operation implements at least a portion of a signal analysis function; programmatically including the first operation in a sweep loop; receiving second user input specifying a sweep configuration for a sweep on the indicated parameter; performing the sweep on the indicated parameter in accordance with the sweep configuration, thereby generating resultant data for the sweep; and storing the resultant data for the sweep. However, Takano et al. do not teach said performing the sweep on the indicated parameter in accordance with the sweep configuration comprises: providing a next sweep value of the parameter to the first operation as a current value of the parameter for the first operation; performing the first operation using the current sweep value of the parameter, thereby generating corresponding resultant data; storing the corresponding resultant data; and repeating said providing a next sweep value, said performing the first operation using the current sweep value of the parameter, and said storing the corresponding resultant data in an iterative manner in accordance

with the sweep configuration; and including all of the other limitations in the respective independent claims.

4. U. S. Patent No. 4,839,583 to Takano et al. is the reference closest to the claimed invention. Takano et al. disclose a memory medium comprising program instructions for specifying a signal analysis function, comprising: receiving first user input indicating a parameter for a first operation, wherein the operation implements at least a portion of a signal analysis function; programmatically including the first operation in a sweep loop; receiving second user input specifying a sweep configuration for a sweep on the indicated parameter; performing the sweep on the indicated parameter in accordance with the sweep configuration, thereby generating resultant data for the sweep; wherein said performing the sweep on the indicated parameter in accordance with the sweep configuration comprises: iteratively performing the first operation, wherein at each iteration the first operation is performed using a respective value of the parameter, and wherein at each iteration corresponding resultant data are generated. However, Takano et al. do not teach performing the first operation comprising performing the first operation using a hardware device, and wherein said iteratively performing the first operation comprises triggering the hardware device at each iteration; and including all of the other limitations in the respective independent claims.

5. U. S. Patent No. 4,839,583 to Takano et al. is the reference closest to the claimed invention. Takano et al. disclose memory medium comprising program instructions for specifying a signal analysis function, comprising: receiving first

user input indicating a parameter for a first operation, wherein the operation implements at least a portion of a signal analysis function, wherein the signal analysis function comprises a plurality of operations; programmatically including the first operation in a sweep loop; receiving second user input specifying a sweep configuration for a sweep on the indicated parameter; determining one or more other operations of the plurality of operations for inclusion in the sweep loop, wherein said determining the one or more other operations of the plurality of operations for inclusion in the sweep loop comprises: performing the sweep on the indicated parameter in accordance with the sweep configuration, thereby generating resultant data for the sweep, wherein said performing the sweep on the indicated parameter further comprises performing the one or more other operations; and storing the resultant data. However, Takano et al. do not teach receiving third user input indicating the one or more other operations of the plurality of operations for inclusion in the sweep loop; and programmatically including the one or more other operations in the sweep loop; and including all of the other limitations in the respective independent claims.

6. U. S. Patent No. 4,839,583 to Takano et al. is the reference closest to the claimed invention. Takano et al. disclose a memory medium comprising program instructions for specifying a signal analysis function, comprising: receiving first user input indicating a parameter for a first operation, wherein the operation implements at least a portion of a signal analysis function, wherein the signal analysis function comprises a plurality of operations; programmatically including the first operation in a sweep loop; determining one or more other operations of

Art Unit: 2857

the plurality of operations for inclusion in the sweep loop, wherein said determining the one or more other operations of the plurality of operations for inclusion in the sweep loop comprises: receiving second user input specifying a sweep configuration for a sweep on the indicated parameter; performing the sweep on the indicated parameter in accordance with the sweep configuration, thereby generating resultant data for the sweep; and storing the resultant data. However, Takano et al. do not teach programmatically analyzing dependencies among prior operations and the first operation to determine the one or more other operations, wherein the first operation has a dependency on at least one of the one or more other operations; and programmatically including the one or more other operations in the sweep loop; and including all of the other limitations in the respective independent claims.

7. U. S. Patent No. 4,839,583 to Takano et al. is the reference closest to the claimed invention. Takano et al. disclose a memory medium comprising program instructions for specifying a signal analysis function, comprising: displaying a Graphical User Interface (GUI) on a display; receiving first user input to the GUI indicating a parameter for a first operation, wherein the operation implements at least a portion of a signal analysis function; programmatically including the first operation in a sweep loop; receiving second user input to the GUI specifying a sweep configuration for a sweep on the indicated parameter; performing the sweep on the indicated parameter in accordance with the sweep configuration, thereby generating resultant data for the sweep; and storing the resultant data. However, Takano et al. do not teach the GUI further comprising a sweep

Art Unit: 2857

configuration dialog corresponding to the sweep configuration, wherein the configuration dialog includes one or more GUI elements indicating the sweep configuration; receiving third user input to the configuration dialog modifying the sweep configuration, thereby generating a modified sweep configuration; wherein said performing the sweep on the indicated parameter in accordance with the sweep configuration comprises performing the sweep on the indicated parameter in accordance with the modified sweep configuration; and including all of the other limitations in the respective independent claims.

8. U. S. Patent No. 4,839,583 to Takano et al. is the reference closest to the claimed invention. Takano et al. disclose a memory medium comprising program instructions for specifying a signal analysis function, comprising: displaying a Graphical User Interface (GUI) on a display, wherein the GUI is comprised in a signal analysis function development environment; receiving first user input to the GUI indicating a parameter for a first operation, programmatically including the first operation in a sweep loop; receiving second user input to the GUI specifying a sweep configuration for a sweep on the indicated parameter; performing the sweep on the indicated parameter in accordance with the sweep configuration, thereby generating resultant data for the sweep; and storing the resultant data. However, Takano et al. do not teach the operation implementing at least a portion of a signal analysis function, wherein the signal analysis operation comprises a plurality of operations, including the first operation, wherein each of the plurality of operations corresponds to a respective function block; displaying the corresponding function blocks for the plurality of operations in a diagram,

wherein the diagram that visually represents I/O relationships between the function blocks;; and including all of the other limitations in the respective independent claims.
